EASTSIDE 10K
TRAINING PLAN

#UAEASTSIDE10K

A RUN IN, FOR, AND WITH THE EASTSIDE

GET FAST, STRONG AND READY TO TOE THE LINE COME RACE DAY.

Whether you're running your first race or your 100th, having a well-structured prepared training plan is your best bet to set you up for a successful race day. From mobility and endurance to strength and recovery, this plan provides everything you need to have your best race yet—and maybe even snag yourself a PB along the way.

All you need is eight weeks, a foam roller and a lot of commitment to get fast, strong and ready to toe the line come race day.

Are you ready?

TABLE OF
CONTENTS

PROGRAM
OVERVIEW

THIS EIGHT-WEEK PROGRAM WILL HELP YOU BECOME A BETTER RUNNER WITH MOBILITY, ENDURANCE STRENGTH, AND RECOVERY TRAINING.

STRENGTH

The strength program is designed specifically to meet the demands of a runner who is looking to get a competitive edge. It is not designed to build muscle, but rather enhance your stability and mobility to run stronger. All sessions are circuit-based to help build strength while taxing your cardiovascular system.

TIMES PER WEEK: 2X

OPTIONAL EQUIPMENT: KETTLEBELLS, DUMBBELLS

MOVEMENT AND MOBILITY

The Movement & Mobility Routine will prepare your body for running by increasing mobility at the ankles, hips and T-spine. It will also activate your body for the twice weekly strength sessions. Keeping the body in good condition is not only better for performance, but also helps you stay injury-free. These pre-run exercises are developed to work on areas of the body that are pushed to the max while running, specifically the feet, hips and torso.

TIMES PER WEEK: EVERY DAY

REQUIRED EQUIPMENT: FOAM ROLLER

RUNNING AND ENDURANCE

The running program is built for beginner- and intermediate-level runners. You will be introduced to tempo running, fast hill repeats and long slow runs, as well as understanding the discipline of recovery runs.

TIMES PER WEEK: 5X

RECOVERY

The recovery routine is based on Under Armour's belief that today's recovery is tomorrow's training. It is essential to attempt to restore movement quality after a run. The program is designed to hit the areas of the body that need the most attention. These moves will require a foam roller or tennis ball, which can be found at your local gym or health club. These moves should be done after every workout.

TIMES PER WEEK: EVERY DAY

REQUIRED EQUIPMENT: FOAM ROLLER OR TENNIS BALL

UA RUN TRAINING
TERMINOLOGY

TEMPO RUN

A disciplined, steady-paced run, working at threshold pace (between 10K and marathon race pace). Aim for an RPE (Rate of Perceived Exertion) of 7 out of 10.

HILL REPEATS

Uphill running intervals done at near maximum intensity. The recovery jog between sets is critical. It is key to focus on technique and form.

INTERVAL RUN

A run with periods of increased speed for preset time limits. Aim for an RPE of 8 out of 10.

LONG RUN

Longest run of the week, performed at a steady and comfortable pace. Aim for an RPE of 6 out of 10.

UA STRENGTH TRAINING
P R I N C I P L E S

IF FOLLOWED, THE UA STRENGTH TRAINING PRINCIPLES WILL LEAD TO SAFE AND EFFECTIVE MOVEMENTS, WHICH WILL ULTIMATELY KEEP YOU RUNNING BETTER, FASTER, STRONGER AND LONGER.

EVERY REP IS INDIVIDUAL

The first rep and the last rep should look the same. Think about a split second reset between each rep to reset your body's alignment and brace your core. Create tension, get stable and then move.

CREATE WHOLE BODY TENSION

You want to create tension in key areas of your body. Squeezing your glutes, quads and torso and locking in your shoulder blades keeps you stable and aligned to get maximum benefit from every rep.

FAIL WITH INTEGRITY

It's OK to stop while ahead. If you perform a rep and it doesn't feel right, maybe try one more. If it doesn't get any better, stop. Beyond that point, you're doing more harm than good. Don't be afraid to save a rep for next time.

INCREASE YOUR CHALLENGE

In any of the exercises, load can be added to increase the challenge, but only when the movements have been mastered with your bodyweight first!

QUALITY OVER QUANTITY

Don't be concerned with how many reps or sets you get. Be concerned with how they look and feel.

CAREFUL PROGRESSION

Progressions should only be attempted when complete mastery of a current level has been obtained (e.g., Mastery of a stationary lunge before progressing to the walking lunge).

EASTSIDE 10K

COURSE MAP

START / FINISH AREA

START LOCATION - WOODWARD'S DEVELOPMENT

Runners will start and finish on Cordova St beside the Woodward's Development. After heading west, runners will turn back onto Water St through Gastown, continuing on Alexander St to Gore Ave. The route circles Oppenheimer Park, then follows Alexander St under Heatley Ave and onto the Powell St overpass. Runners continue on Powell St up to Dundas St, then climb Templeton Dr up to circle Pandora Park before returning down Dundas St and back onto Powell St. The route continues onto Alexander St. and then drops down to Railway St. before returning to Gastown on Alexander St. Runners turn up Columbia St onto Powell St, then take Carrall St to Cordova St to finish back at Woodward's.
